LATE TULIPS

Long Stemmed

We combine under this heading varieties of Darwin, Breeder and Cottage Tulips.

Tulips, which may well be called the Queen of Spring Flowers, will again be available this fall in Holland grown bulbs and, from latest reports, quality of the stock will be superb.

Tulips may be planted in many locations, producing colorful and gorgeous effects. Plant bulbs 6 to 9 inches apart; in beds, in the perennial border where groups of 3 to 7 bulbs, spotted through the bed or border where space permits, will produce a beautiful effect. A very beautiful display is obtained by planting groups of either separate colors or mixed. Tulips may also be planted front of a garden wall, along a foundation, back of the rock garden or any other location where spring color will add to the appearance.

WE RECOMMEND PLANTING ALL TULIPS 6 INCHES OVER THE TOP OF THE BULB

A thoroughly decayed, natural material valuable for all types of soils. Used in sandy soils to add fiber and make more moisture retaining properties, and in heavy or clayey soils its action is to make a more friable and better drainage condition.

Newly planted trees, shrubs an especially evergreens of all types are very much benefited by a liberal mulch of Peat Moss, and each spring the last year's mulch should be worked into the soil and a new mulch applied. It is also of value as a mulch for perennial beds, rose beds, etc.
